Game Design

Geisha Wonders is a 5-reel, 30-betline video slot with a maximum 120 coins per bet. The slot game screen is comprised of three main elements. These are the video display area, keypad, and game panel.

Video display area - This houses the main game and free spins as well as the paytable and jackpot win presentations.

Keypad - The keypad displays the current bet level, the current number of bet lines, available cash in coins, and the current coin value. In addition, the main game buttons used to select the bet level, bet lines, coin value, and start the game can be found in this area.

Game panel - Displays the account information, buttons for the game settings menu, audio, game rules, and autoplay. In the account information section the display switches between showing the available cash, current bet and amount won and player mode.

Game rounds

A Geisha Wonders game round starts when the player clicks the spin button; the amount bet is deducted from the current credit (available coins and credit). The reels spin and automatically come to rest. The player has an option to stop the reels by clicking the spin button (available when G4 mode is disabled).

Game results

Players can win on any one of the bet lines on which they bet.

The game highlights which lines are winners and how much has been won on each line. The total winnings are added together and shown in the Win box. The amount won is added to the cash and displays in the game panel.

The Buddha acts as a regular wild symbol to substitute for other symbols to complete winning combinations.
